To: All Clients
Cc: Sales and Customer Service Staff
From: June Amoroso, CEO
RE: SurePath Imaging

In our continuing efforts to provide our clients and patients with the best services and newest technologies, Sunrise Medical Laboratories is proud to introduce an exciting new technology to the New York Metropolitan Region. As of September 1, we will be using the BD FocalPoint GS system on all our SurePath PAPs. We are the first laboratory in this area to utilize this system since it became commercially available. This Computer Imaging System adds to our complete array of state of the art services at Sunrise.

All SurePath PAP slides will be reviewed not only by the BD FocalPoint GS Imaging System but also by our cytotechnologists. This double review of the SurePath slides has been shown to increase disease detection. HPV, Chlamydia and GC testing will still be available when using SurePath or ThinPrep.

Please contact our Customer Service Department or your sales representative for more information at 1-800-782-0282.
